

Smith & Ouzman
Bespoke Security Print Solutions

Partnering clients
worldwide to provide
bespoke, value added
security print solutions

Security | Integrity | Reliability

The **trusted** name in **security print** solutions

At Smith & Ouzman, our focus is on providing clients with bespoke security print solutions.

Our approach stems from experience of supplying clients worldwide with the highest standards of security, integrity and reliability.

Our unique combination of knowledge, technology and innovation puts us in an ideal position to anticipate and fulfil clients' needs, both today and in the future.

Heritage and experience

We believe that knowledge comes with experience.

Smith & Ouzman has a history in print dating back to 1845. Originally based in the City of London, our heritage lies in security and financial print.

Still independently owned, over the years the business has continued to invest, develop and expand and now employs over 100 highly trained and skilled staff and the latest technology and equipment in our secure purpose built site.

**Our key aim -
to give clients
complete
satisfaction
and confidence
in the services
we offer.**

Why clients choose Smith & Ouzman

FACT – today we all exist in a world where counterfeiting and fraud are a huge and growing problem.

Protection of personal data, documents and systems is paramount.

Smith & Ouzman has been supporting organisations to protect their documents and data for decades and is at the forefront of developing, designing and printing solutions that protect companies, their brands and their clients.

Our clients include:

- UK banks
- UK and overseas government departments
- Election bodies
- Financial institutions
- Commercial organisations
- Retailers
- Public sector bodies
- The education sector
- Awarding bodies
- Trade associations

A stack of documents is shown, with a prominent green overlay covering the top portion. The documents have a blue wavy security pattern at the bottom. A white text box is positioned on the right side of the green overlay. The text inside the box reads: "Our range of accreditations gives clients confidence in our abilities to supply the highest quality products and services." The word "Registrar" is visible on one of the documents, and "MU/DI" is partially visible on another. A pink serrated edge is visible on the left side of the bottom document.

Our range of accreditations gives clients confidence in our abilities to supply the highest quality products and services.

Meeting clients' expectations

Keeping clients informed is an essential part of our service.

At Smith & Ouzman, we focus on meeting and exceeding clients' expectations.

We do this through providing a bespoke service, keeping clients informed and delivering on our promises.

How do we do this?

We have audit trails in all areas to check that strict security procedures are followed and that high security and confidential documents are constantly monitored.

Production planning is implemented in all departments to guarantee economic and timely production.

A total end to end solution

Today's dynamic and cost conscious marketplace requires all suppliers to provide time saving solutions in a cost efficient manner. We recognise the need to offer clients an end to end solution to reduce lead times and costs.

Our total end to end solution includes security print through to software and hardware development, web portals, data management, personalisation and distribution services.

Our complete solution recognises the multi-media

requirements of the modern marketplace.

From a single data file, we are able to manufacture and despatch personalised security printed documents, confidential letters, SMS and email broadcasts.

Bespoke internet based web portals are designed and developed to the requirements of each client, which improves the speed of processing and communication.

The extra edge in assurance

Forgers and counterfeiters are constantly trying to outwit and defraud organisations. When they do, they can destroy brand identity, cause financial losses, endanger lives and undermine product and company integrity.

A combination of overt, covert and forensic security features creates a well protected document that can also be authenticated easily when inspected.

These features include complex micro-printing techniques, anti-copy features and various types of reactive inks to authenticate and identify documents.

These can be combined with holograms, as well as bespoke and generic security papers, which incorporate such features as watermarks, embedded threads and fibres, and chemical sensitisation to further protect the document.

Documents can be personalised to include personal information, sequential serial numbering and encrypted barcodes to protect against fraudulent alteration, and enables documents to be electronically tracked from despatch to redemption and if required through to reconciliation.

A close-up photograph of a document, likely a diploma or certificate, featuring a prominent green circular seal on the left. The document is printed on a textured, light-colored paper. The text is partially visible and includes phrases such as "Diploma at a", "on Ceremony", and "in the year". The overall image has a blue and green color palette, with the green seal being the most vibrant element.

We are constantly exploring new technologies and methods of protecting against increasingly sophisticated forgers and counterfeiters.

A service catering for diverse requirements

Any document that has a financial, perceived or intrinsic value is susceptible to counterfeiting and fraud.

Smith & Ouzman offers the knowledge and expertise to determine these risks and threats, and has the production capability to produce the level of security that is required.

Our clients can have absolute confidence in every stage of the design, production and delivery of their products.

Innovation & the future

Smith & Ouzman is committed to continuing to provide bespoke security print solutions to our clients' unique requirements.

By developing and embracing new technologies, we have combined the traditional aspects of security printing and state of the art digital printing techniques, with internet and electronic communications to provide fully personalised, unique, secure documents and solutions that can be track and traced throughout their life-cycle.
